

XTask streamlines task assignments across your facilities service all from a PC, mobile device or touchscreen on the ward. It's commonly used for the management of porters, domestic rapid response, HPV, pest control, linen, catering, and security teams.

The most complete, real-time task management system available for the healthcare estate.

Automated Task Allocation

By assessing elements such as task urgency, available resources, staff training specialities and location, the system intelligently prioritises and allocates tasks, seamlessly integrating with the hospital's operational framework.

PAS and RIS Integrations

Can be integrated with patient administration and radiology information systems to maximise efficiencies.

Clinical Touch Screens

Tasks can be logged via touch screen devices at ward level to make it as quick, easy and efficient as possible for clinical teams without the need for a mouse and keyboard.

Reporting

Full suite of dashboards and reports to assist with performance monitoring and service improvement. The system can also feed data via an API into external reporting platforms, such as Power BI.

Real Time Location Services

The system can utilise real-time location services technology to track moving assets such as wheelchairs and medical equipment, or allocate tasks to staff based on a real-time location.

+ many other features designed to save time and improve patient satisfaction.

✓ Enhances patient and staff satisfaction

✓ Improves patient flow

✓ Increases efficiency

✓ Saves time

Reduce, improve, track, and move.
Realise More with Synbiotix.

Synbiotix 

"The systems are very intuitive and user-friendly, with robust and comprehensive administrative and reporting functions. The data Synbiotix provide us with is invaluable to alter processes and create operational efficiencies across multiple departments"

Emily Griffitt

Contracts & Systems Manager, University Hospital Bristol and Weston
